INTRODUCTION

Secondary data is an essential part of the Community Health Needs Assessment (CHNA). It is used as an adjunct to the anecdotal data gathered within the community. It is used to benchmark community data against state and national benchmarks and allows the entity to review and confirm or refute their intuitions about their community.

Healthy People 2030 was developed by the U.S. Department of Health and Human Services, Office of Disease Prevention and Health Promotion with the goal of creating initiatives for health improvement based on national data. They have defined the Social Determinants of Health (SDOH) as the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. The areas of focus were developed to represent the broad categories/factors that can impact overall health.

Five areas of focus were defined as follows:

- **Education Access and Quality:** This includes access to educational opportunities, ranging from pre-school to post-secondary educational levels, vocational training, literacy levels, educational achievement, and language.
- **Economic Stability:** This includes employment levels, income, expenses/debt, and support.
- **Social and Community Context:** This includes homelessness, vehicle access, teen birth rates, juvenile and overall crime rates, and young people not in school and not working.
- **Healthcare Access and Quality:** Access to insurance, insurance types, access to primary and dental care, primary care utilization including prevention services, hospital and ED utilization, and healthy behaviors will be included in the dataset.
- **Neighborhood and Physical Environment:** This includes housing and transportation costs, environmental hazards, access to broadband and computers, access to fitness/exercise opportunities, and overall access to food.

Each community determines how to best extract their secondary data either by zip codes or counties defined as the entity primary/secondary service areas.
